AI WITH EZZI · KARACHI · VENTURELAB.AI

The client sees what they're *going to get.*

Agentic CAD for interior design. A sentence in — a full 2D plan and 3D walkthrough out, live, in front of the client.

THE PROBLEM

Design intent *dies in translation.*

- The client describes a **feeling** — warm, open, not hotel-like. Not a drawing.
- The requirement engineer **interprets** it, draws it, sends it back.
- The client still can't read the drawing, so the loop starts again.
- Every loop costs a **week, a revision fee** and sometimes the project.

THE INSIGHT

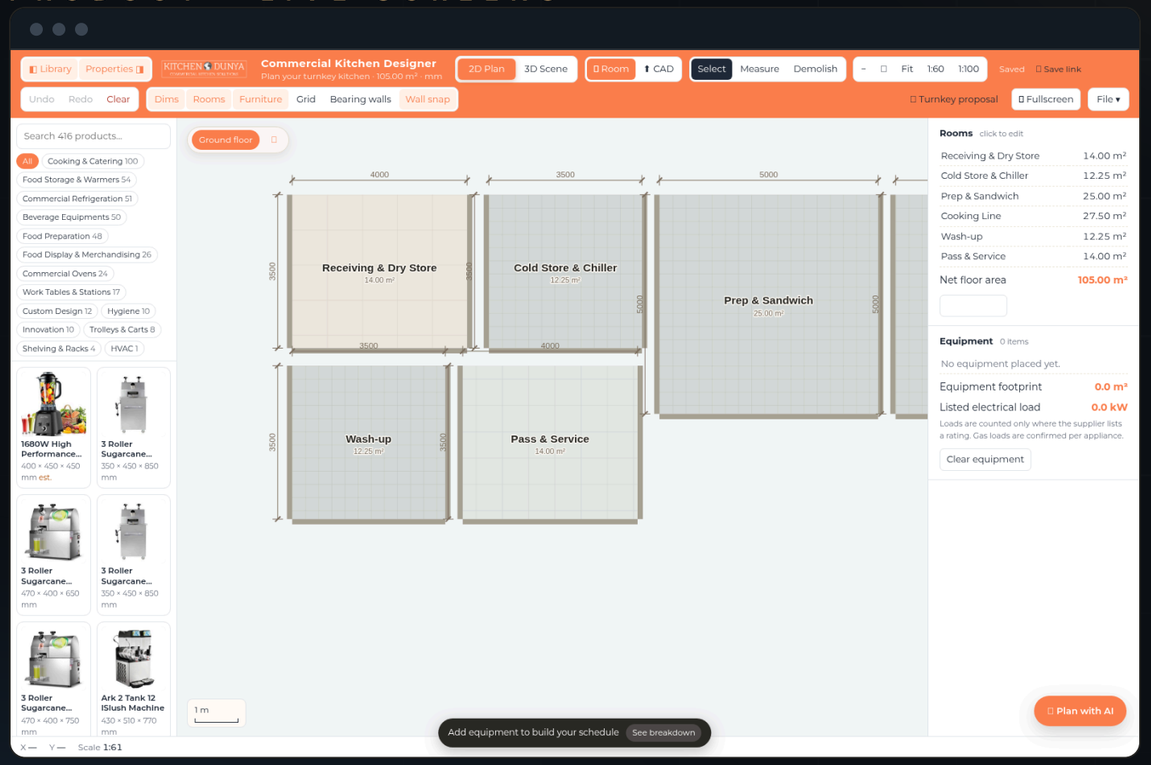

Clients don't buy square metres. They buy *what they can picture.*

The gap isn't design skill. It's the interface between the client's words and the engineer's model. Fix the interface, and the whole project speeds up.

THE PRODUCT

Agentic CAD your client can *talk to.*

- **Speak or type:** "a warm café kitchen with a cooking line, wash-up and cold store."
- The plan appears **live in 2D**, then in **3D** — with real products placed.
- The client edits by talking. The studio keeps control of the model.
- **White-label:** the studio's brand, its own tenant, its own link.

One engine. *Two views.*

The same model the client sees is the model the studio builds from. 2D plan and 3D scene stay in sync — no re-drawing between the pitch and the project.

HOW IT WORKS

Natural language is the *new interface.*

Voice / text brief → Intent model (DeepSeek) → Plan engine (rooms, walls, flow) → 3D scene → Products & quote

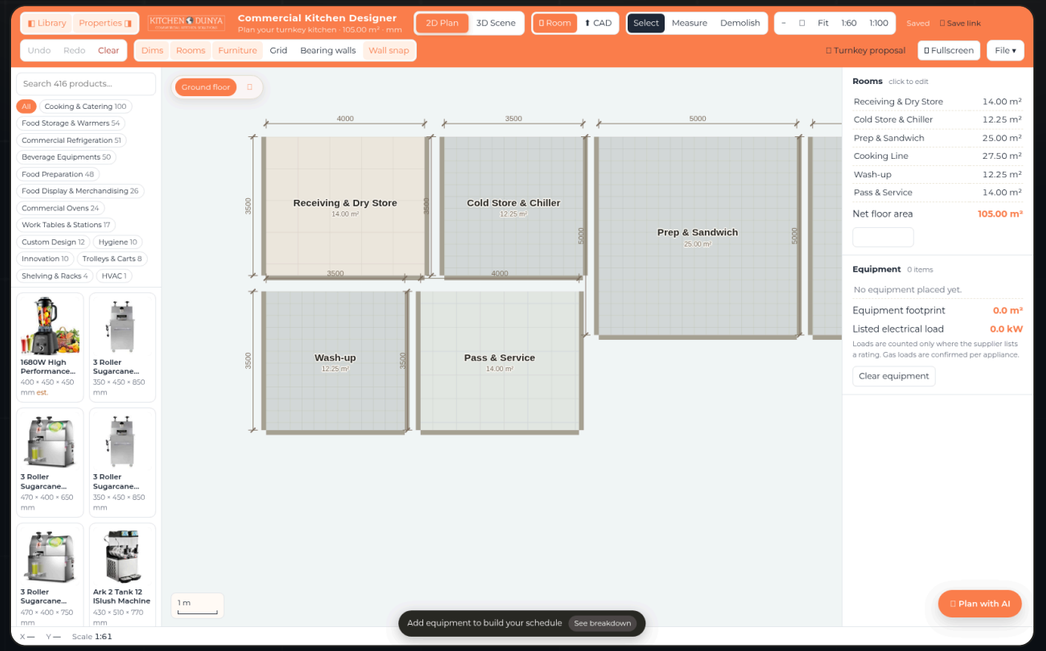

Voice layer via Deepgram, reasoning via DeepSeek, multi-tenant runtime on our own VPS. The studio can intervene at any step — the AI drafts, the professional decides.

DEMO

24 seconds.
Real product.

A live tenant, not a mockup. The brief is typed into the assistant; the plan and 3D appear in the same session.

hussainezzi.github.io/floorplan-demo

WHY IT MATTERS

Certainty before *construction.*

For the client

They see the room before it exists. No jargon, no imagining a floor plan. Fewer surprises, faster decisions.

For the studio

Fewer revision cycles, faster sign-off, a premium buying experience — and a model that carries into execution.

WHY NOW

The pieces finally *line up.*

LLMs

Can turn messy human language into structured geometry — reliably enough to draft.

Voice

Real-time speech is good enough that talking feels faster than clicking.

Browser 3D

A 3D walkthrough now runs on the client's phone, in the meeting.

MARKET · WEDGE

Start where the gap *costs the most.*

- **Turnkey interior & kitchen studios** — high ticket, visual, revision-heavy.
- Then **fit-out contractors**, furniture retail and real-estate developers.
- Initial geography: **Pakistan and the GCC**, where we already have live tenants and relationships.

BUSINESS MODEL

White-label SaaS, *per studio.*

REVENUE LINE	WHAT IT IS
Tenant subscription	Monthly per studio, branded workspace and link
Onboarding	Catalogue, products and team setup
Usage / seats	Additional designers and client sessions
Quote & catalogue add-ons	Product data, proposals, supplier integrations

TRACTION

Built, deployed, *in use.*

2

LIVE TENANTS

Kitchen Dunya & Hatimi Interiors

2D → 3D

WORKING PRODUCT

Voice and text, in production

24s

LIVE DEMO

Public, no edits

Pre-revenue, design-partner stage. Our advantage is that the product already runs real client sessions — not a prototype waiting for funding.

GO TO MARKET

Sell through *the studios.*

- **Direct:** demo-led sales to interior and turnkey studios.
- **Channel:** partner with Odoo/ERP implementers and fit-out contractors who already sit in the deal.
- **White-label:** the studio's brand brings its own clients; we charge the studio.
- **Proof:** each tenant becomes a reference in its city.

COMPETITION

Professional tools. *Not client tools.*

CATEGORY	WHAT IT DOES	WHERE WE DIFFER
AutoCAD / SketchUp	Drafting for professionals	Client can't use it alone
3D visualisers	Beautiful still images	Static, not editable live
Product configurators	One product, one choice	Whole room, whole plan
Floorplan	Agentic CAD for the client	Live 2D + 3D, white-label

ROADMAP

From plan to *purchase order.*

Now

Voice and text → 2D plan → 3D, multi-tenant, live with two studios.

Next

Self-serve onboarding, catalogue → quote automation, more product libraries.

Later

VR walkthroughs, supplier pricing, execution tracking.

TEAM

AI with Ezzi

A small Karachi team building agentic systems: Odoo ERP, WhatsApp agents and AI products. We ship and run them — this deck's product is live today.
